

Wireless keyfob offers the ultimate in convenience and control.

Our Code Encryptor sends one of four billion possible codes randomly changing every time you press the button. No improvement in technology for a "code grabber" will ever be able to bypass this state-of-the-art security. The Code Encryptor will provide security and peace of mind today, tomorrow and in the future.

Convenience

- Easily adds to any home alarm system to turn it on and off.
- No need to remember codes to arm and disarm alarm.
- Plug and play installation.
- Add remote controls for every family member for security, safety and convenience.

Peace of Mind

- Add a panic button for emergency situations.
- Reduces user error and false alarms.
- Access to home, garage door and police via a keychain remote.

Wireless Remote-Control Keyfob

*Security,
Convenience,
Peace of Mind....
All at the Push
of a Button.*

Protecting what

You value most.

Wireless Remote- Control Keyfob

Add optional lighting control: light your way to and from the house – never enter the home in a dark environment again.

*Protecting what
You value most.*

Code Encryptor II Features

- **4 billion hopping codes that NEVER repeat.**
- **Garage door:** Open and close any garage door with our secured remote.*
- **Panic Button:** Press and hold for a few seconds to trigger alarm system or alert your central station.*
- **Compact Size:** Easily attaches to your key chain to provide alarm, garage door and panic button. Allows you to remove that bulky unsecured garage door remote from the visor of your car.
- **Code learning:** Add new remotes to your system, delete lost or stolen ones easily and quickly. In seconds you can add a new remote to your Code Encryptor or delete a lost or stolen remote through the press of a button.
- **1 year warranty on all parts.**

Code Encryptor II Features

- **Works with all FBII control panels as well as other alarm manufacturers control panels** through the data bus, uses NO ZONES and will provide an AWAY, STAY, DISARM, and PANIC output.
- **Auto Detect:** Once you connect the data lines, the Code Encryptor II will automatically determine which alarm it connected to and will self program.
- **Status Light:** This attractive LED and plate can be mounted in the garage to show status of the alarm system as you leave or come home. Check the status of the security system as you pull out of the garage; if the alarm is not armed, press your Code Encryptor remote and receive an immediate status light update that the system armed and in what mode.**
- **Entry/Exit Illumination or Timed Output:** Every time the garage door is opened or closed the Code Encryptor II provides a (-)3 minute timed output wire to illuminate porch lights for entry and exit lighting via a powerflash module.** If the garage door is hardwired, that zone can be set as zero entry delay. This output provided by the Code Encryptor II will automatically bypass that zone when the garage is opened or closed with our remote.**
- **Supervision:** Your Code Encryptor II will supervise and monitor the battery inside your remote control alerting you when its time to replace it.
- **Add and Delete Remotes:** Simply enter add or delete codes through the keypad.
